HOWTO: Print Color Images (Windows Forms Controls)

To print color images using the ImagePrintDocument class you must use a boolean value of (true) for the RenderBottomTop parameter.

This method will draw the image onto a graphics object and convert to a bottom-top Bitmap if necessary. Some devices such as printers will fail when drawing a top-bottom image such as those internally stored in DotImage and .NET.

Example

```
magePrintDocument printDoc = new ImagePrintDocument(); printDoc.GetImage += new
PrintImageEventHandler(PrintDocument_GetImage); void PrintDocument_GetImage(object sender,
PrintImageEventArgs e) { AtalaImage img= new AtalaImage(imagePath); img.Draw(e.Graphics, new
Rectangle(100, 100, Convert.ToInt32(e.Graphics.DpiX), Convert.ToInt32(e.Graphics.DpiY)), new
Rectangle(Point.Empty, img.Size), true); }
```
