

FAQ: How Can I Check For, or Enable Duplex Scanning in DotTwain?

To check if a scanner is duplex (or double-sided) enabled, the duplex property (of Atalasoft.Twain.Device) can be checked to tell you what is supported by the device.

- **none:** duplex scanning is not supported
- **one-pass:** duplex is supported, both sides are scanned in one pass
- **two-pass:** duplex is supported, each side is scanned one at a time

In contrast, the DuplexEnabled property must be set to true to enable the duplex scanning feature. To turn duplex scanning off, just set it to false.
