

## ERRMSG: Unable to Download Files Attached to Support Cases

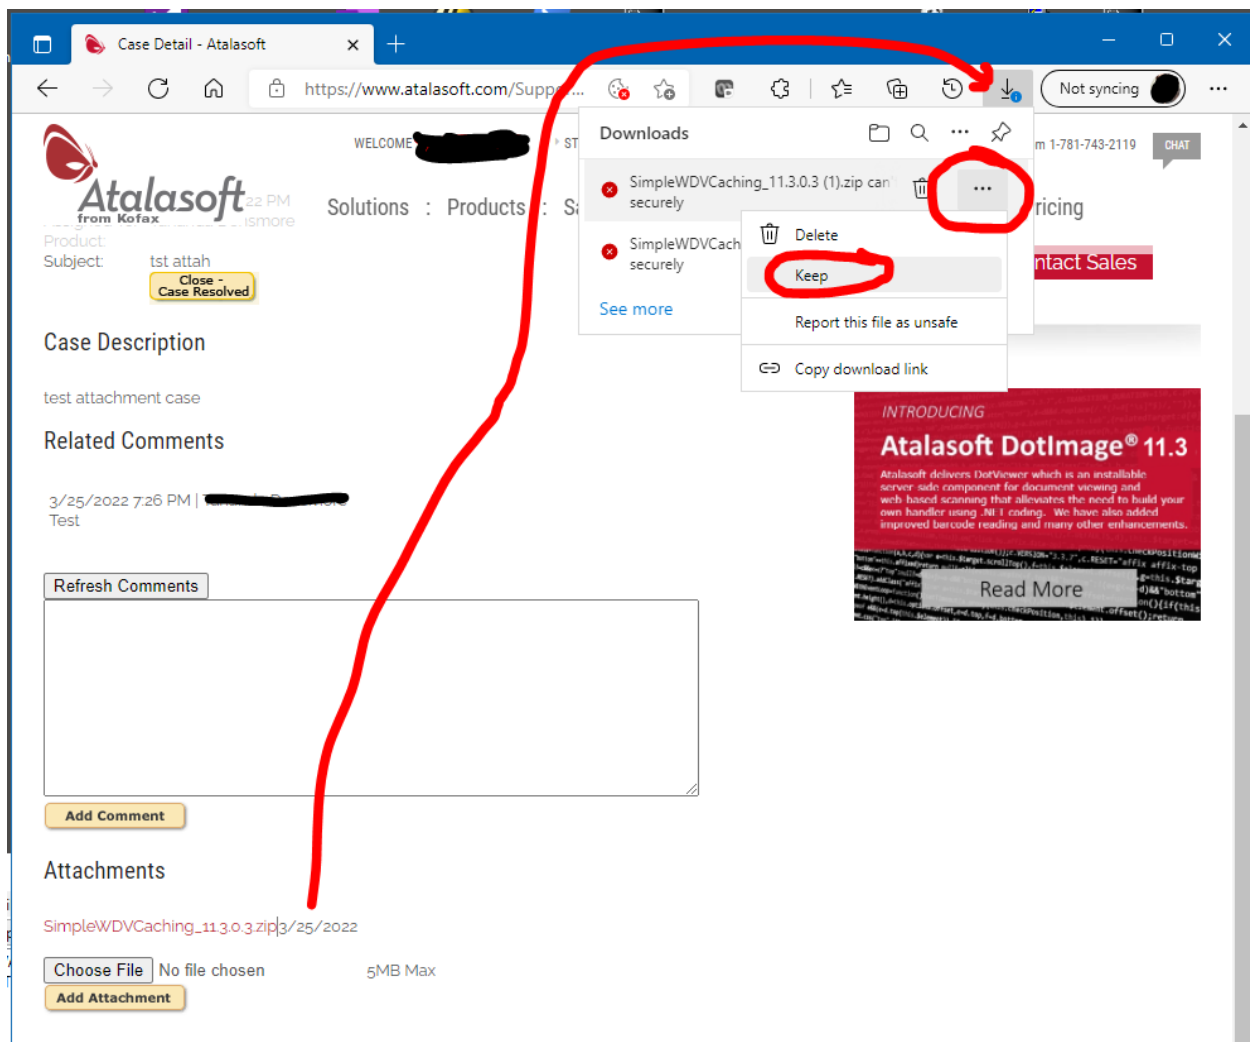

Multiple users have reported issues downloading attachments from support cases this week

Our web team is looking into the issue but in the meantime, it's been determined this is an issue with Google Chrome and Chrome-based Edge Chromium

These browsers are incorrectly blocking our attachments as unsafe

You can use FireFox

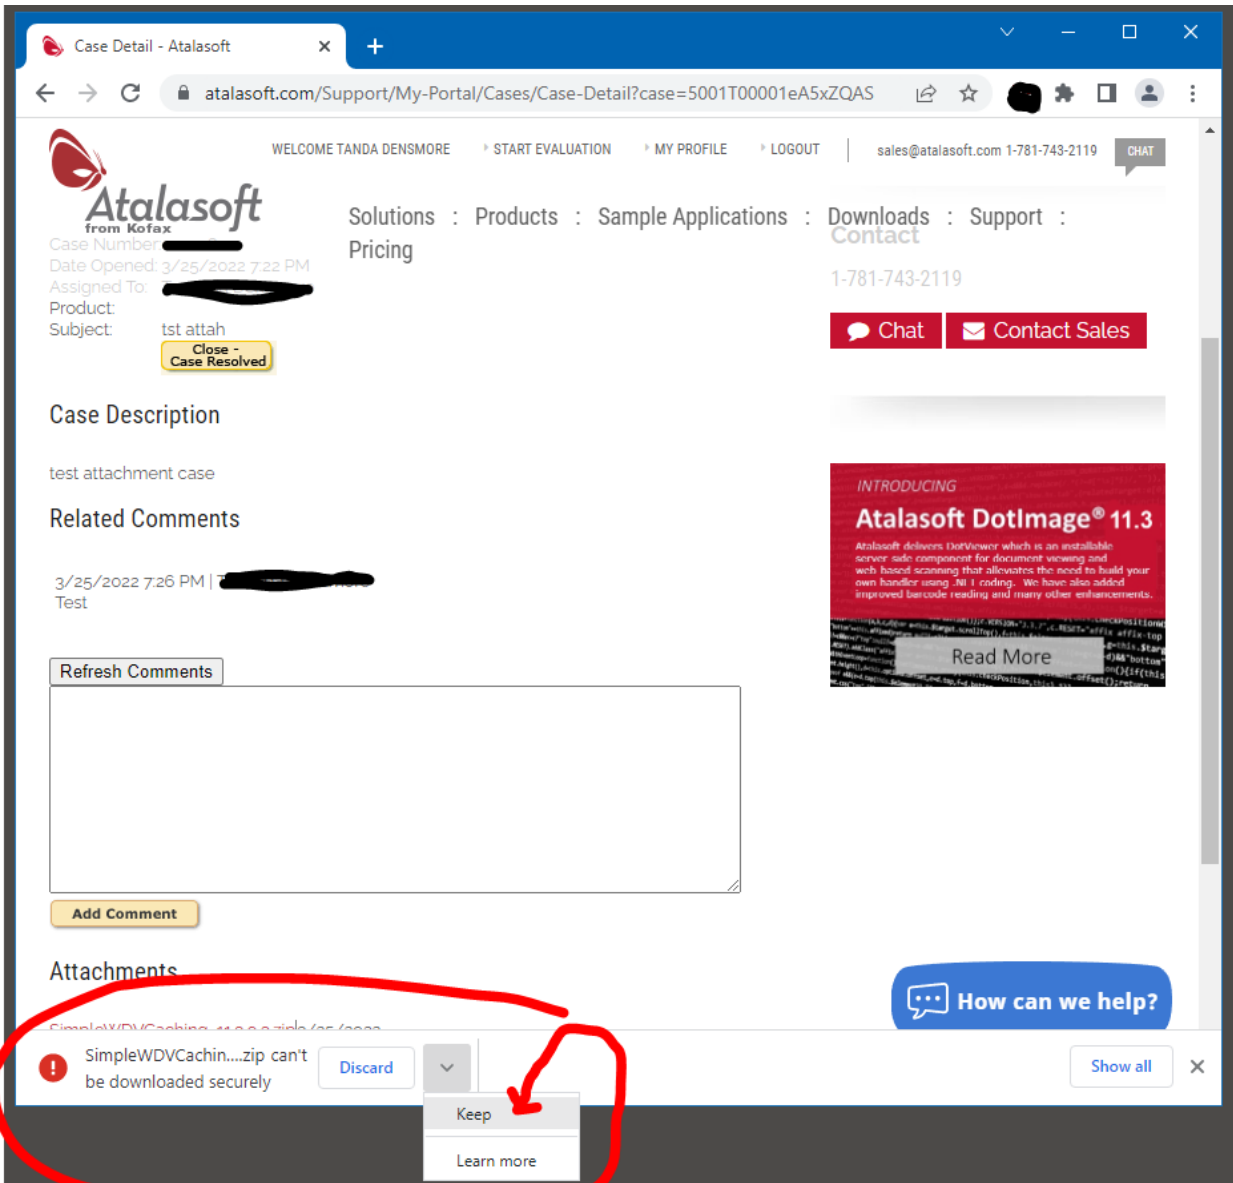

For Edge Chromium click on the download and look in the upper right for a message that the attachment can't be downloaded securely, then mouse over it to see the ... option then select keep

The screenshot shows a web browser window with the URL <https://www.atlasoft.com/Support/CaseDetail.aspx?CaseID=123456789>. The page displays a support case for "Atalasoftware" with the subject "tst attach" and a status of "Case Resolved". The case description is "test attachment case". A red line highlights the download process. The browser's Downloads panel is open, showing a file named "SimpleWdvcaching\_11.3.0.3 (1).zip" that failed to download securely. A context menu is open over the file, with the "Keep" option circled in red. The "Keep" option is highlighted, indicating the user's action to bypass the security warning. The page also features a "Related Comments" section with a comment from "3/25/2022 7:26 PM" and an "Attachments" section with a file named "SimpleWdvcaching\_11.3.0.3.zip" (3/25/2022, 5MB Max).

## ERRMSG: Unable to Download Files Attached to Support Cases

For Chrome, right click on the file and hit save as, again, look for the message (lower left corner of the browser) that the file can't be downloaded securely - click on the down arrow and select keep

The following settings changes are provided as-is and we're not officially recommending you use them, but if you find that Google Chrome is overly aggressive in enforcing "safe browsing" with regard to giving false alarms, you can go into

chrome://settings/security

## ERRMSG: Unable to Download Files Attached to Support Cases

and select

No Protection (not recommended)

which should disable download blocking

**USE THIS AT YOUR OWN RISK**
